Audit Preparation Checklists

1 Leadership and Commitment

Verify that top management has demonstrated leadership and commitment to the BCMS. Ensure that roles, responsibilities, and authorities are clearly defined and communicated throughout the organization.

2 Policy and Objectives

Review the business continuity policy to ensure it aligns with the organization's purpose and supports its strategic direction. Check that measurable business continuity objectives have been established and are being monitored.

3 Risk Assessment and Business Impact Analysis

Examine the risk assessment and business impact analysis processes. Verify that they are comprehensive, up-to-date, and have been used to inform the development of business continuity strategies and plans.

4 Business Continuity Plans

Assess the completeness and effectiveness of business continuity plans. Ensure they cover all critical functions identified in the BIA and include clear procedures for activation, response, and recovery.

Testing and Exercises

1

Plan Tests

Develop a comprehensive testing schedule that covers all aspects of the business continuity plans. Include various types of tests such as tabletop exercises, functional exercises, and full-scale simulations.

2

Conduct Exercises

Execute the planned tests and exercises, involving all relevant stakeholders. Simulate realistic scenarios to challenge the effectiveness of the plans and procedures. Record observations and participant feedback.

Cybersecurity Breach	Data loss, system downtime	Activate incident response team, isolate affected systems, implement recovery procedures
Natural Disaster	Physical damage, inaccessible facilities	Evacuate premises, activate alternate work locations, initiate crisis communication
Supply Chain Disruption	Production delays, inventory shortages	Engage backup suppliers, adjust production schedules, communicate with customers
Pandemic	Employee absenteeism, operational constraints	Implement remote work policies, enhance health and safety measures, adjust service delivery

Implementation and Continuous Improvement

1

Initial Implementation

Establish the BCMS framework, conduct initial risk assessments and BIAs, and develop preliminary business continuity plans. Train staff on their roles and responsibilities within the BCMS.
